

How does this practice relate to the use of technology?

This practice illustrates that technology doesn't need to be electric to be effective

Technology is everything that you can use to help your teaching

Application of scientific knowledge

technology can be any tool to make a task easier; these small household items are able to be used as learning tools

my deskmate cannot access this because there are too many ppl viewing the board

Technology doesn't need to be connected to a computer to be effective

Working creatively with tools/resources you're given

What is technology?

A tool to achieve a learning outcome

Tools that assist in performing an activity

Any tool that makes a task easier

technology is something that makes a task easier; it may be physical, electronic, or even metaphorical

Technology is supposed to simplify or make information easier to transmit and receive

Technology is the further improvement of object to make their objectives more efficient and effective

Technology is a tool we can use to aid in carrying out a task

Which tool we can use to explain or visualize or facilitate talking about sth by that.

Technology is a tool that supports learning.

the practical application of knowledge especially in a particular area

Novel approaches to addressing specific tasks

Try not to overuse technology when it is not necessary or beneficial

Any tools that can be used to demonstrate/explain a concept

Why, when, and how would you use technology?

When it's making an intervention that enhances your student's learning experience--not just for the sake of using tech.

To help communicate and illustrate key concepts

To illustrate concepts that are not able to easily be seen or understood

Extra modules and/or materials to connect students outside of class for those who want more examples

Depending on the classroom, there are different things you can use in each class! Document camera, whiteboard walls, etc.

To help explain key concepts to learners.

To assist in explaining any topic or increase engagement

All the time

every day, every minute, for everything

To facilitate understanding for students.

When a concept might benefit from being demonstrated in several different ways

When using a tool makes it more likely your students will understand a core concept

technology can be used any time you want a task to become easier. It is something helpful that aids in achieving a goal

To help make learning practical and fun

We can use technology to enhance our understanding and to elucidate concepts we might not be able to see (especially in science).

Do we ever not use technology? The desks, chairs, pens, etc that we use on a daily basis would be technology
